Access to College education e-portfolios for SAS doctors

August / 2020

Background

SAS doctors make up 20% of the medical workforce but many lack workplace support, find it difficult to move between specialties, have limited access to training and some have reported bullying.

In February 2019 Health Education England (HEE) and NHS Improvement, in collaboration with the Academy of Medical Royal Colleges and NHS England, published a paper titled Maximising the Potential: essential measures to support SAS doctors. New measures outlined in this document set out how HEE, NHS Improvement, NHS Employers and other partners would work together to support and develop SAS doctors.

There are 11 commitments in Maximising the potential which relate to the development of the SAS workforce. This document relates to Commitment 6: the Academy will work with the Royal Colleges to encourage access to e-portfolios for SAS doctors who require it.

There is no formally recognised development opportunity for SAS doctors within the specialty doctor grade. Some SAS doctors choose to enhance their careers by following the CESR/CEGPR pathway to join the specialist register.

When applying for CESR/CEGPR certification, access to their relevant College e-portfolio to record and match competence against a curriculum is essential. There is variation in how different Colleges allow SAS doctors to access their e-portfolios, some easier than others.

Access to e-portfolios is also useful for doctors collecting evidence for appraisal and revalidation.

Some SAS doctors may choose to re-enter training via a formal national training programme. Currently the ease of stepping in and out of a training programme depends on individual College policy regarding access to the e-portfolio to gain recognition for their experience and competence while out of training. This pathway needs streamlining with more uniformity, ease of access and better facilitation.

The Academy SAS Committee obtained data via SAS College leads about Colleges’ criteria and policies governing access to e-portfolios. The information was obtained through asking the following questions:

1. Does your College give access to its e-portfolio for doctors not in training posts?
2. If yes, what are the requirement criteria?
3. Do SAS doctors need to be members to access your e-portfolio?
4. If yes, is the membership cost the same as for trainees?

The responses are featured below:
## SAS access to College e-portfolios

Discussion

The Colleges where SAS doctors have access to education portfolios have been highlighted in the table.

The data table suggests that in most Colleges SAS doctors have access to the e-portfolio. However, the policy, requirement criteria and the level of access vary between Colleges. Some Colleges have a membership requirement with a fee structure either equivalent to consultants or trainees or a separate non-trainee associate membership category. The ease of access is also variable between different Colleges. Lack of e-portfolio access may be due to practical issues such as costs to extend the licensing agreement.

A few Colleges still do not have policies in place to provide access to education e-portfolios for SAS doctors. Some of them are working on it. Colleges such as the physician and surgical Colleges, RCOG and FDS do not have membership requirements and provide easy access.

Actions

College SAS leads should circulate this report to individual Colleges to work with them towards:

— All Colleges having SAS access to e-portfolios
— Making the process and access policy simplistic, standardised and uniform
— Guidance and mentoring being made available from individual Colleges for SAS doctors going through CESR application and those returning to training
